SUMMARY

Motivated AI practitioner with experience in machine learning research, model development, and practical system building. I work with modern deep learning techniques, including model editing, continual learning, and multimodal systems. I have contributed to academic projects and real-world applications involving data analysis, visualization, and AI-assisted tools. I aim to strengthen my expertise through research, engineering, and collaboration on impactful AI projects.

EDUCATION

2023 - present & Pursuing Bachelor's Degree **VNUHCM- University of Science** (GPA: 3.85/4.0)
2023 - present & Graduated From **Luong Van Chanh High School For the Gifted** (GPA: 9.6/10.0)

EXPERIENCE

SAB Sep 2023 – Sep 2025

- **Academic Associates:** Supported academic operations and coordinated learning activities for students.
- **Head of Academy:** Led academic planning and contributed to improving internal workflows.

SELAB Jan 2024 – Present

- **Research Assistance** Assisted in machine learning research by designing and implementing deep learning models, running controlled experiments, and evaluating performance metrics.
- **Lab Researcher:** AI Researcher focused on diffusion models, transfer learning, and image and 3D generation. Research interests include generative modeling, adapting pretrained models to new domains, and efficient fine-tuning for visual and geometric data. Publications primarily explore generative models and transfer learning for image and 3D applications.

SAIGON AI HUB - Google Lab April 2026 – Present

- **AI Researcher** Contributing to multimodal retrieval and video analysis research projects in collaboration with VNU and VNG under Google Lab. Currently serving as a primary researcher, leading core research directions and model development.

PROJECTS

OuterHomes: NASA Exoplanets ML Framework

[Backend](#) | [Frontend](#)

A web application for seamless machine learning model training and Kepler light-curve visualization:

- Endpoints for processing, inference, model training, and visualization. Built ML training and prediction workflows for NASA exoplanet datasets
- Custom dataset utilities, ensemble models, and a PyTorch CNN+Attention classifier. Designed experiments, evaluation, and model-driven analysis of exoplanet characteristics.

FoodMark

[Backend](#) | [Frontend](#)

FoodMark is an application that allows users to share food-related videos. The app automatically extracts and organizes useful information, mapping restaurants or breaking down recipes into clear steps. This turns passive viewing into active exploration, allowing users to revisit and act on their discoveries.

AIRS — AI Recruitment Assistant

[Full Project](#)

The AI-Powered Recruitment System is an intelligent recruitment assistant designed to automate the analysis and evaluation of resumes (CVs) based on job descriptions (JDs) provided by employers. By leveraging cutting-edge AI models, the system can:

- Provides fairness-oriented scoring and explainable recommendations.
- Validates details in resumes and reduces bias during the evaluation process with details explanations and highlights

This achievement earned the project a Top 3 placement in the Southern Region at the Google-hosted GDG Hackathon Challenge in Vietnam.

InsightForge - Agent-driven Platform For Content Creators

[Backend](#) | [Frontend](#)

InsightForge is an agent-driven research platform designed for content creators, enabling them to analyze, verify, and connect information across multiple social media sources. The system provides powerful product management and content analysis capabilities by aggregating insights from all linked accounts, helping users make more informed and strategic content decisions. It can be thought of as a “Claude-like” assistant tailored specifically for content creation workflows.

This project achieved Top 5 in Vietnam at the Google-hosted GDG Hackathon Challenge.

SKILLS

Programming	Python, JavaScript, HTML, Go, Kotlin, C++, SQL
Machine Learning	Deep Learning, Model Editing, Continual Learning, Computer Vision, NLP, Multi-modal Learning, Diffusion, Transfer Learning
AI Engineering	Agents Pipeline, MCP for Agents, A2A Protocol, Training pipelines, data preprocessing, experiment tracking, evaluation metrics, FastAPI deployment, optimization, debugging
Frameworks	PyTorch, TensorFlow/Keras, HuggingFace Transformers, Ultralytics, OpenCV, scikit-learn, ReactJS, Langchain, Langgraph, A2A
AI Engineering	Training pipelines, data preprocessing, experiment tracking, evaluation metrics, FastAPI deployment, optimization, debugging
App Development	Jetpack Compose, Clean Architecture, Kotlin Coroutines, Supabase Auth, Firebase, SQL databases
Tools	Git, Docker, Linux, LaTeX, Overleaf, Postman, Android Studio, Jupyter
Cloud Technologies	AWS, Google Cloud Platform, Firebase, Microsoft Azure, Vercel, Supabase
Language	Vietnamese (MT), English (IELTS 7.0), Chinese (HSK3)
